PROTECT YOUR HERD FROM TB

RESTRICT contact between badgers and cattle

MANAGE cattle feed and water

STOP infected cattle entering the herd

REDUCE risk from neighbouring herds

MINIMISE infection from cattle manure
Bovine TB can be devastating to your community. Take these five actions to protect yourself and your neighbours:

**RESTRICT** contact between badgers and cattle
- Find out if badgers visit your farm.
- Introduce barriers to prevent badgers accessing cattle.
- Limit access of cattle to badger latrines and setts.

**MANAGE** cattle feed and water
- Restrict badger access to feed stores, troughs and mineral licks.
- Don’t put feed on the ground at pasture and clean up spillages.
- Use clean, fresh water and restrict badger access to water troughs.
- Only feed waste milk to calves if it has been boiled or pasteurised.

**STOP** infected cattle entering the herd
- Ask for TB history information before you buy new cattle.
- Post-movement test cattle entering the herd.
- Isolate all higher-risk cattle before they enter the herd.

**REDUCE** risk from neighbouring herds
- Check local TB outbreaks data online at www.ibtb.co.uk.
- Put in place effective barriers between neighbouring herds.
- Avoid sharing equipment or vehicles with other farms.
- Avoid sharing cattle grazing with other herds.

**MINIMISE** infection from cattle manure
- Store manure for a long period before spreading on farm.
- Only spread manure on arable land or pasture that is not going to be grazed by cattle for at least two months.
- Minimise aerosols and contamination of roadways when spreading.
- Don’t spread manure from other farms.
